

FABIAN ARMANDO YAPURA CLAROS

Software Engineer | Full Stack Developer

hola@yapura.dev | +52 477 569 0282 | yapura.dev

Software Engineer with over 8 years of experience in Full Stack development and web architecture. Specialist in Next.js, React, Astro, Node.js, and NestJS, with experience in REST API design, AWS, MySQL, and MongoDB. I have developed high-traffic B2B platforms, e-commerce, and scalable systems focused on performance and security.

Technology stack

Frontend: React.js, Next.js (App Router), Astro, Tailwind CSS, HTML5, CSS3, Responsive UI, SPA & SSR architectures

Backend: Node.js, NestJS, REST API design, authentication flows (JWT / role-based access), server-side rendering integrations

Databases: MySQL, MongoDB, data modeling, query optimization, relational & NoSQL architectures

Cloud & Infrastructure: AWS (EC2, Lightsail, Route53, SES, IAM), Linux servers administration, NGINX reverse proxy & performance tuning, containerization with Docker

DevOps & Automation: GitHub Actions (CI/CD pipelines), automated deployments, environment configuration, build optimization, version control with Git

AI & Generative Technologies: Integration of Generative AI APIs such as OpenAI and Anthropic, prompt engineering, AI-powered product features, automation workflows, content and data processing with LLMs

MOST RECENT WORK EXPERIENCE

BACKEND WEB SPECIALIST | FRONTEND - IGECO [EVENTOS B2B]

2023 - 2025 León Guanajuato México

RESPONSIBILITIES

End-to-end management of cloud infrastructure, ensuring scalability, high availability, and security.

Leadership in the development of proprietary digital platforms for event operations, visitor registration, e-commerce, and exhibitor management.

Oversight of web architecture, APIs, databases, and real-time integration systems.

Design and implementation of in-house registration and access control systems, eliminating dependence on external providers.

Development of customized e-commerce platforms for:

- Ticket sales
- Premium conferences
- Additional event services

Creation of a comprehensive platform for exhibitors, allowing:

- Payment for stands and additional services
- Furniture rental
- Management of exhibitor badges

Design and implementation of a premium program management module, exposing information through a REST API, consumed by the public visitor site, allowing synchronization and

visualization of changes in real time.

Implementation of a matchmaking system, connecting exhibitors and visitors according to interests and business profile.

Management of domains, DNS, SSL certificates, firewalls, and security policies.

Automation of internal processes to improve the operational efficiency of the sales and events team.

Direct collaboration with marketing, sales, and management areas, positioning IT as a business enabler.

ACHIEVEMENTS

- Designed and implemented a proprietary digital platform for B2B events, centralizing registration, payments, booth rentals, and lead generation.
- Reduced operating costs by eliminating external vendors through customized internal solutions.
- Improved the experience for exhibitors and visitors through 100% digital and self-managed processes.
- Implemented scalable and secure cloud infrastructure, supporting high traffic spikes during events.
- Increased commercial efficiency by allowing exhibitors to close sales and capture leads in real time.
- Integrated technological solutions that connect marketing, sales, and operations on a single platform.

IT MANAGER - DIFRAXION GROUP [Marketing Digital]

2016 - 2023 León Guanajuato México

RESPONSIBILITIES

- As a project leader responsible for creating solutions using development tools for companies, I love being able to translate customer requirements or project objectives into programming code using programming languages such as HTML, CSS, JavaScript, and specific frameworks or tools to achieve the goal.
- I am responsible for managing and maintaining the technical and operational aspects related to domains and web hosting infrastructure. I handle console management in different development environments and operating systems, installation of SSL security certificates, firewall administration of ports to the Internet or to a specific IPv4 range or address, static public IPs, DNS record administration, configuration and administration of dedicated email services, ensuring that domains are correctly registered and renewed on time, as well as administering and configuring hosting servers to ensure that websites are available and functioning optimally.
- I design, implement, and manage digital signage systems in various environments, such as stores, shopping centers, businesses, airports, hotels, and other public spaces. I use hardware and software components to create efficient, effective digital signage solutions and manage specific content management systems (CMS) to control and update content remotely.

ACHIEVEMENTS

- Implement AWS infrastructure to improve performance, security, and optimize costs for our services using AWS Lightsail for medium-sized services that require high deployment speed, AWS EC2 for services with high availability demands, AWS Route53 for domain and DNS record management, AWS SES to create mailings or notification systems for our websites, and AWS IAM for better management and monitoring of access to our services.

- Implement and manage digital signage systems with CMS software such as Cayin, Brightsign, and Samsung MagicInfo, creating servers with AWS EC2 Ubuntu Server and Lightsail Windows Server so as not to depend on the brands' hosting service.
- Develop web apps for interactive touch kiosks using API and SDK integration to provide valuable information for internal communication screens in industrial sectors, state government, and corporations.
- Implement SEO optimization and best practices to improve the performance of our websites and have a greater impact on digital marketing campaigns.
- As a frontend and backend programmer during this period, I developed many websites and landing pages using the Codeigniter and ReactJs frameworks for advertising campaigns in various sectors such as state government, commercial brands, and industry. I implemented online store services using WordPress, Prestashop, and Shopify.
- I implemented streaming services to improve the user experience on our live event platforms using Vimeo, Vmix, Teams, and Zoom.
- I implemented Microsoft 365 services for businesses to improve the productivity and performance of my colleagues.
- I managed a team of six motivated engineers with best practices in programming and systems administration. I provided training on the use of digital signage platforms and how to merge frontend development to take full advantage of their features.
- Axion Man Award for best performance and productivity.

FRONTEND DEVELOPER - HIGHVIEW

2015 - 2016 León Guanajuato México [Technology Consulting and Advisory Services]

RESPONSIBILITIES

- Optimize websites and multimedia content for better performance in browsers, remote technical support for customers.
- Email and IP telephony service support.
- Website development based on customer requirements.

ACHIEVEMENTS

- Developed a portal for design and digital marketing process control using HTML5, CSS, JS, and PHP.
- Improved the performance of several websites by applying MVC.

JUNIOR DEVELOPER - PRESIDENCIA DE LEON

- During this period, I completed my professional internship, applying what I had taught myself about HTML, CSS, and JS. I was able to participate in updating the SIMEL platform (León Municipality Measurement and Evaluation System), which was part of the 2012-2015 Government Program.

EDUCATION

LIC. SOFTWARE ENGINEER - UNIVERSIDAD DE LEON

2012 - 2016 León, Guanajuato México
